

PROBLEM 1. High cost and limited availability of professional therapists. 2. Stigma surrounding seeking help for mental health issues. 3. Lack of 24/7 immediate support for individuals experiencing early signs of anxiety or stress. Traditional therapy, helplines, generic meditation apps, or "googling" symptoms. EXISTING ALTERNATIVES Traditional Therapy: Booking expensive face-to-face appointments. Search Engines: Googling symptoms (often leads to "self-diagnosis" anxiety). General Apps: Using generic meditation or "mood tracker" apps that don't give personalized AI advice. Social Support: Talking to friends/family (not always available or professional). Doing Nothing: Ignoring the health issue due to cost or fear.	SOLUTION AI Agent for Mental Health: An empathetic AI agent that uses Natural Language Processing (NLP) to perform preliminary mental health screenings and provide evidence-based coping strategies (like CBT exercises) in real-time. KEY METRICS Number of daily active users, reduction in "stress scores" reported by users, and successful referrals to human professionals for high-risk cases.	UNIQUE VALUE PROPOSITION A judgement-free, 24/7 AI companion that identifies mental health risks before they become crises. "High-Level Concept: "ChatGPT for proactive mental wellness. HIGH-LEVEL CONCEPT	UNFAIR ADVANTAGE Specialized training on clinical datasets (verified by healthcare professionals) and integration with Agentic AI workflows for personalized, long-term habit tracking. CHANNELS University wellness centers, corporate HR employee assistance programs, and social media awareness campaigns.	CUSTOMER SEGMENTS University students, corporate employees in high-stress jobs, and individuals in rural areas with no local clinics. Early Adopters: Tech-savvy college students facing exam-related burnout. EARLY ADOPTERS University Students Corporate Employees Rural Residents Mental Health Advocates
COST STRUCTURE API costs for the AI model (like OpenAI or Gemini), cloud hosting fees, and costs for initial dataset validation by medical experts.	REVENUE STREAMS A "Freemium" model (basic chat is free, deep analytics/reports are paid) or a B2B subscription model where companies pay to provide the tool to their employees.
